Experiment No.:7

TITLE: Study Cisco Router Configuration Command using Cisco packet tracer

AIM: To study basic Cisco Router configuration Commands

Expected Outcome of Experiment:

CO: Study of Basic Cisco Switch & Router Configuration Commands & Static Routing implementation using Cisco Packet Tracer.

Books/ Journals/ Websites referred:

1. S. Tanenbaum, "Computer Networks", Pearson Education, Fourth Edition
2. Forouzan, "Data Communications and Networking", TMH, Fourth Edition

Pre Lab/ Prior Concepts: Basics of Routing and Cisco Packet Tracer

New Concepts to be learned: Different Modes of Operation of Cisco router

Cisco IOS Modes of Operation:

- The Cisco IOS software provides access to several different command modes. Each command mode provides a different group of related commands.
- For security purposes, the Cisco IOS software provides two levels of access to commands:
 - User mode
 - Privileged mode
- The unprivileged user mode is called user EXEC mode. The privileged mode is called privileged EXEC mode and requires a password. The commands available

in user EXEC mode are a subset of the commands available in privileged EXEC mode.

- The following table describes some of the most commonly used modes, how to enter the modes, and the resulting prompts. The prompt helps you identify which mode you are in and, therefore, which commands are available to you

Modes of Operation	Usage	How to enter the mode	Prompt
User EXEC	Change terminal settings on a temporary basis, perform basic tests, and list system information.	First level accessed.	Router>
Privileged EXEC	System administration, set operating parameters.	From user EXEC mode, enter enable password command	Router#
Global Config	Modify configuration that affect the system as a whole.	From privileged EXEC, enter configure terminal.	Router(config)#
Interface Config	Modify the operation of an interface.	From global mode, enter interface type number.	Router(config-if)#
Setup	Create the initial configuration.	From privileged EXEC mode, enter command setup.	Prompted dialog

User EXEC Mode:

When you are connected to the router, you are started in user EXEC mode. The user EXEC commands are a subset of the privileged EXEC commands.

Privileged EXEC Mode:

Privileged commands include the following:

- Configure – Changes the software configuration.
- Debug – Display process and hardware event messages.
- Setup – Enter configuration information at the prompts.

Enter the command disable to exit from the privileged EXEC mode and return to user EXEC mode.

Configuration Mode:

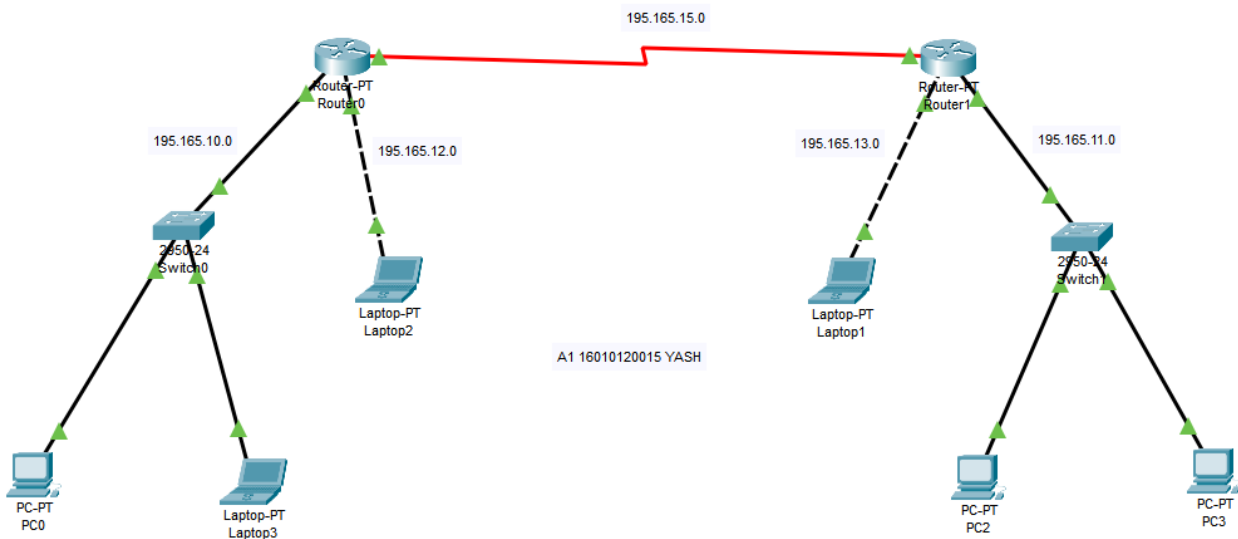

Configuration mode has a set of sub-modes that you use for modifying interface settings, routing protocol settings, line settings, and so forth. Use caution with configuration mode because all changes you enter take effect immediately.

To enter configuration mode, enter the command `configure terminal` and exit by pressing `Ctrl-Z`.

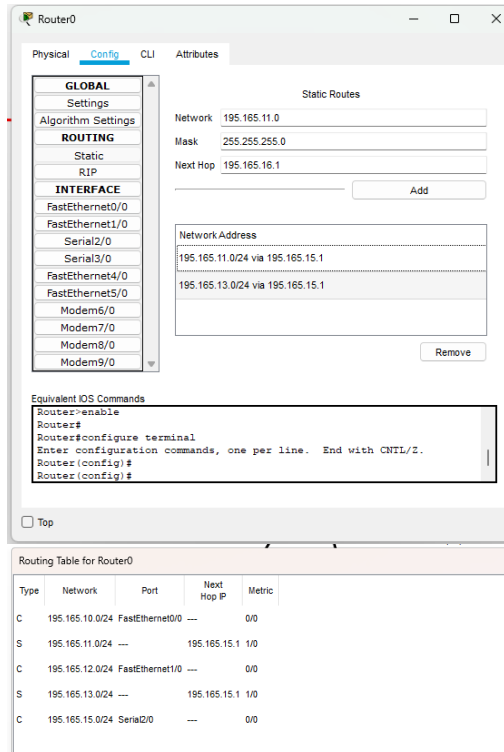

Note: Almost every configuration command also has a `no` form. In general, use the `no` form to disable a feature or function. Use the command without the keyword `no` to re-enable a disabled feature or to enable a feature that is disabled by default. For example, IP routing is enabled by default. To disable IP routing, enter the `no ip routing` command and enter `ip routing` to re-enable it.

IMPLEMENTATION: (printout of code)

DESIGNED TOPOLOGY :

ROUTER 0 Conf

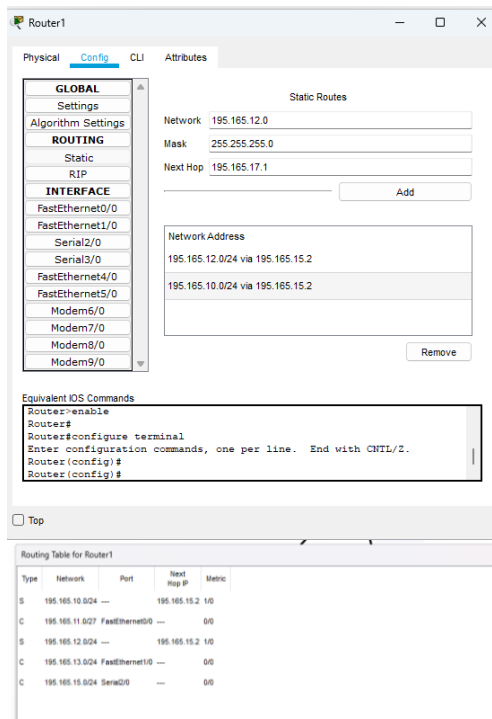

Router0 configuration window showing the Config tab. The left sidebar lists configuration sections: GLOBAL, Settings, Algorithm Settings, ROUTING, Static, RIP, INTERFACE, and various interfaces (FastEthernet0/0 to 5/0, Modem6/0 to 9/0). The main area shows the Static Routes configuration. The Network field is set to 195.165.11.0, Mask to 255.255.255.0, and Next Hop to 195.165.16.1. The Network Address field shows 195.165.11.0/24 via 195.165.15.1 and 195.165.13.0/24 via 195.165.15.1. The Equivalent IOS Commands section shows the following commands:

```
Router>enable
Router#
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#
Router(config)#
```

Routing Table for Router0

Type	Network	Port	Next Hop IP	Metric
C	195.165.10.0/24	FastEthernet0/0	---	0/0
S	195.165.11.0/24	---	195.165.15.1	1/0
C	195.165.12.0/24	FastEthernet1/0	---	0/0
S	195.165.13.0/24	---	195.165.15.1	1/0
C	195.165.15.0/24	Serial2/0	---	0/0

ROUTER 1 Conf

Router1 configuration window showing the Config tab. The left sidebar lists configuration sections: GLOBAL, Settings, Algorithm Settings, ROUTING, Static, RIP, INTERFACE, and various interfaces (FastEthernet0/0 to 5/0, Modem6/0 to 9/0). The main area shows the Static Routes configuration. The Network field is set to 195.165.12.0, Mask to 255.255.255.0, and Next Hop to 195.165.17.1. The Network Address field shows 195.165.12.0/24 via 195.165.15.2 and 195.165.10.0/24 via 195.165.15.2. The Equivalent IOS Commands section shows the following commands:

```
Router>enable
Router#
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#
Router(config)#
```

Routing Table for Router1

Type	Network	Port	Next Hop IP	Metric
S	195.165.10.0/24	---	195.165.15.2	1/0
C	195.165.11.0/24	FastEthernet0/0	---	0/0
S	195.165.12.0/24	---	195.165.15.2	1/0
C	195.165.13.0/24	FastEthernet1/0	---	0/0
C	195.165.15.0/24	Serial2/0	---	0/0

ROUTER 0 CLI

```
Router>enable
Router#
Router#configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#interface GigabitEthernet0/0
Router(config-if)#no shutdown
Router(config-if)#

ALL ROUTER CONFIGURATION :

Simulation frm Laptop3 to pc3

CONCLUSION:

Thus, in this experiment we Understood basic Cisco Router configuration Commands and Implemented Static Routing using Cisco Packet Tracer successfully.
